OVERVIEW

1. OVERVIEW

1.1. DESCRIPTION AND MISSION

The **TOXRUN** was initially established in 2021 as an interdisciplinary research center under IUCS-CESPU, with a clear focus on toxicology and health sciences. Given its multidisciplinary nature and the growing relevance of the One Health approach, the unit was rebranded in 2023 as **1H-TOXRUN (One Health Toxicology Research Unit)**. This new name reflects the integration of human, animal, and environmental health into a holistic and collaborative framework, which has become increasingly essential in global health research. The 1H-TOXRUN operates with a well-defined organisational structure, producing a wealth of scientific output characterised by excellence. The One Health concept is patented within the 1H-TOXRUN organization and constitution, as it gathers researchers from all the main transdisciplinary areas of knowledge, such as biology, human health, veterinary, toxicology, and chemistry, just to mention some examples.

The mission of 1H-TOXRUN is to generate cutting-edge, scientifically robust knowledge with societal impact, fostering technological development, knowledge transfer, and ensuring healthy and sustainable living environments. Through collaboration with numerous institutions, the unit aims to produce relevant research that addresses current health challenges while also promoting the education and training of young scientists. It is committed to informing society about the value of scientific research and its economic impact while contributing to the creation of healthier lives and a more sustainable planet.

In 2024, **1H-TOXRUN** became part of **UCIBIO** (Unit for Research in Bioactive Chemistry and Biotechnology) as part of the [FCT Evaluation of R&D Unit 2023-2024 process](#) (which is still under evaluation). This integration brought three specialised research laboratories under its wing: the [Forensic Sciences Lab](#), the [Toxicologic Pathology Lab](#), and the [Translational Toxicology Lab](#). These laboratories enhance the unit's capabilities and further consolidate its position as a leading research center with a multidisciplinary and global health mission.

1.2. GOVERNANCE

Under the IUCS-CESPU, the governance (Figure 1) of 1H-TOXRUN is organised as follows:

- Director – Ricardo Dinis-Oliveira
- Management Board – Ana Raquel Freitas, Áurea Carvalho, Cláudia Ribeiro, Inês Caldas, Ricardo Dinis-Oliveira, Sara Ricardo
- Scientific Council – all PhD integrated members
- Advisory Committee - Hassan Bousbaa, Vítor Seabra

The 1H-TOXRUN is supported by several dedicated offices, each focused on improving research and its wider impact. These include the Bibliometric & Funding Support Office, Data Science Office and the Office of Communication and Public Engagement. Their main objectives are:

- Managing and sharing scientific metrics: Monitoring, analysing and publishing research output metrics and key data from affiliated research centres.
- Raising the visibility of research: Promoting scientific discoveries and ongoing projects across multiple platforms, with a focus on maximising outreach through social media.
- Media relations: Working with the Communications and Marketing Department to raise public awareness of research and development activities through the media.

Together, these offices play an essential role in ensuring a coordinated approach to the dissemination, impact and visibility of 1H-TOXRUN's research initiatives.

In addition to its own Offices, the 1H-TOXRUN also takes advantage of CESPU transversal specialized services, namely the Projects Supporting Office, Financial, Human Resources, Logistic, and Informatics Departments, the Quality Assurance Services and Communication and Image Offices to provide all the required technical and administrative support.

RESEARCH LABs

2. RESEARCH LABs

Research at 1H-TOXRUN is structured in an interdisciplinary way, spread across three laboratories, each specialising in different areas and fields of study. Although each laboratory has its own specialisation and specific focus, there is a continuous interconnection between them, promoting close collaboration and the sharing of knowledge and resources. This organisational model facilitates an integrated and complementary approach, where different areas of expertise come together to conduct research in a more effective and innovative way. Thus, research at 1H-TOXRUN is carried out in a synergistic manner, harnessing the collective potential of its teams, which are distributed across the following laboratories:

Lab 1 - Translational Toxicology Lab

Lab 2 - Toxicologic Pathology Lab

Lab 3 - Forensic Sciences Lab

2.1. TRANSLATIONAL TOXICOLOGY LAB

Mission

The main research objectives are to study the chemical, biological and toxicological mechanisms of biologically active molecules, and to develop analytical methods for analyzing pharmaceuticals, pesticides, psychoactive substances and other xenobiotics and endobiotics. To this end, the Translational Toxicology Lab brings together researchers from different areas of expertise, namely chemistry, biochemistry, forensics, and microbiology.

2.2. TOXICOLOGIC PATHOLOGY LAB

Mission

The Toxicologic Pathology Lab aims to understand the morpho-functional changes and molecular mechanisms of injury produced in cells, tissues, organs, or body fluids in response to toxic substances, whether xenobiotic (extrinsic to an organism) or endobiotic (produced by an organism). Our research team gathers researchers from different backgrounds focused on understanding disease morphological footprints upon xenobiotic or endobiotic exposure, evaluating drug cytotoxicity and mechanisms of drug resistance, assessing the potential of new toxic substances for disease prevention and therapy, and finding predictive biomarkers of toxicologic injury.

2.3. FORENSIC SCIENCES LAB

Mission

Forensic Sciences Lab stands as a source of innovation and discovery, serving as a dynamic hub for scientists dedicated to pushing the boundaries of knowledge in Forensic Science research.

At the heart of the lab's success is its collaborative ethos. Interdisciplinary teams of researchers, academics, and industry partners work together, fostering cross-disciplinary exchange and synergy. With state-of-the-art facilities and commitment to societal impact, the lab uncovers new insights primarily within forensic investigation.

Its research holds profound implications for scientific progress and societal well-being, shaping the future and making a meaningful difference. It underscores the pivotal role of Forensic Science in societal welfare, focusing on human identification, health impacts, and justice delivery. We aim to enhance crime resolution, protect public health, and ensure justice by harnessing several forensic techniques. This approach solves crimes and champions public safety and rights, significantly aligning scientific innovation with societal well-being.

In addition to our scientific endeavors, our research lab is deeply committed to science communication and public engagement. We regularly host interactive workshops and public lectures to demystify complex scientific concepts and foster science literacy among diverse audiences.
